

Is the water safe to drink? | 1

The tap water is not safe to drink in Peru. Bottled water is readily available for purchase. Don't forget to use bottled water when brushing your teeth. In many places ice is not always made with boiled or bottled water. Order your beverages without ice ("sin hielo"). At Pisac Inn we use bottled water for ice, and we have a large container of bottled water that you can fill up your personal water bottle with for a small fee to help prevent so much trash from plastic bottles.
